

Fast Electromagnetic Analysis Suite (FEMAS)

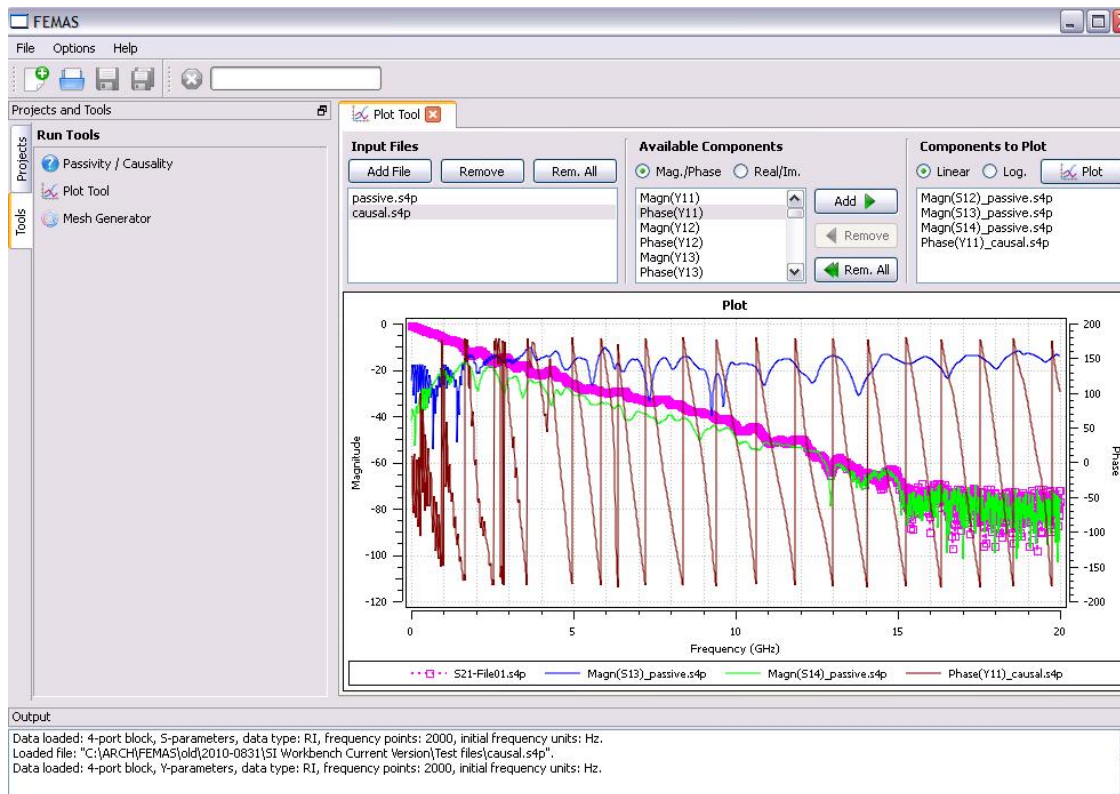

With a Plotting Tool for Touchstone S-Parameters

FEMAS includes a plotting tool that allows the user to quickly and easily make professional looking plots of S-parameter data from touchstone files.

Users can select any number of files and plot magnitude, phase, real, or imaginary data from multiple files or a single file. Users have full control over line color, font size, linear/log scales and much

more. When the user is satisfied, the plot can be exported as a png file for inclusion in reports and presentations.

Plots can be generated from data in other FEMAS tools and/or data from external sources. This is an easy-to-use tool that allows users to create plots to look as they wish.
